IAPMO Testing & Services

(A division of The IAPMO Group)

MATERIALS TESTING

(NSF/ANSI 61 and others)

For over 80 years IAPMO has been a trusted leader in the plumbing and mechanical testing industry. IAPMO Testing & Services, a division of The IAPMO Group, now has a state of the art Analytical Lab to test and evaluate your products to the NSF/ANSI 61 standard.

The goal of IAPMO T&S is to provide quality testing services at a reasonable price, in a timely manner. Working with IAPMO R&T, we provide One-Stop-Testing and fast track listing for the U.S. and Canadian markets.

IAPMO Testing and Services is here to provide support for all of your NSF/ANSI 61 needs including Research & Development, Product Listing/Certification and Quality Control. We are a trusted partner for the plumbing and mechanical industry. The analytical laboratory is also equipped to perform other chemical related testing.

***Our people make the difference.
There is no substitute for experience.***

NSF/ANSI 61 Testing

NSF/ANSI Standard 61 covers indirect additive products and materials, including process media, protective materials, joining and sealing materials, pipes and related products, mechanical devices and mechanical plumbing devices. In essence, every material in contact with water from the supply line including valves, piping and faucets is covered.

NSF/ANSI Standard 61 addresses the crucial aspect of drinking water system components; whether contaminants may migrate from the product/material into the drinking water and if so are the concentrations above acceptable levels in finished water. Obtaining NSF/ANSI certification is critical for any company selling drinking water products/components within the United States and Canada.

“Our focus on customer satisfaction created many positive results: making our customers happy, increasing business, and creating satisfaction within ourselves for achieving our goals.”

IAPMO Testing and Services, LLC

IAPMO T&S – Our Broad Range of Services:

- **Product Testing** – Testing to nationally recognized standards such as NSF/ANSI 61 and NSF/ANSI 14. Additionally, our mechanical lab can test products to other ASME/ANSI, ASSE, ASTM, CSA, MSS and IAPMO Standards. Products tested to these standards are generally for “listing/certification” purposes.
- **Quality Assurance Testing/Evaluation** – This type of testing is usually conducted at the request of a manufacturer or supplier who wishes to assure that models being produced or received are in compliance with the current standards or manufacturer’s own specifications. On-site visits of manufacturing locations are also available to assist manufacturers with their in-house quality control system.
- **Pre-testing Evaluation, Research/Development and Prototype Testing** – Testing of prototype units for compliance to standards can be costly. At IAPMO T&S we offer a pre-evaluation service which includes evaluation of a product to the UPC as well as the applicable test standard. The evaluation may include quality control testing and research and development testing to assist manufacturers in bringing products into compliance with standards and codes. This prototype testing can help assure that production models will also comply with the applicable standards. Pre-testing and evaluation can also help assure that products from overseas will comply with our standards.

“Our dedication to your needs is our ultimate priority.”

- **Failure Analysis Testing** – Testing to the maximum limit to determine a point of failure and an evaluation to determine the reasons or cause of the failure.
- **Liaison Services** – IAPMO T&S acts as a liaison between manufacturers and listing agencies. This may include assisting manufacturers with the preparation of submittal packages, typing applications and delivery of product and applications to various agencies as well as follow-up with the various agencies until certification/listing is granted.
